New *A. cerana* incursions risk
bringing Varroa

What can Queensland’s resident *A. cerana*
tell us about the risk of new incursions?

An invasive history in the Austral-Pacific

Native range
 Invasive range

Queensland's *A. cerana* have (likely) PNG origin.

Koetz 2013 *Insects* 4: 558

Good stowaways

Queensland's *A. cerana*

How many swarms does it take to found a population?

<https://www.daf.qld.gov.au/>

Inbreeding is a problem for honey bees

Because sex (male or female) is determined by a single gene

 <p>Female</p> <div style="display: flex; align-items: center; gap: 10px;"> <div style="text-align: center;">A</div> <div style="display: flex; flex-direction: column; align-items: center;"> <div style="width: 15px; height: 100px; background-color: #e0e0e0; border: 1px solid black;"></div> <div style="width: 15px; height: 100px; background-color: #ffff00; border: 1px solid black;"></div> <div style="width: 15px; height: 100px; background-color: #e0e0e0; border: 1px solid black;"></div> </div> <div style="text-align: center;">B</div> </div> <p>Two distinct alleles</p>	 <p>Normal Male</p> <div style="display: flex; align-items: center; gap: 10px;"> <div style="text-align: center;">B</div> <div style="display: flex; flex-direction: column; align-items: center;"> <div style="width: 15px; height: 100px; background-color: #e0e0e0; border: 1px solid black;"></div> <div style="width: 15px; height: 100px; background-color: #0070c0; border: 1px solid black;"></div> <div style="width: 15px; height: 100px; background-color: #e0e0e0; border: 1px solid black;"></div> </div> <div style="text-align: center;">B</div> </div> <p>One allele (haploid)</p>	 <p>Diploid Male</p> <div style="display: flex; align-items: center; gap: 10px;"> <div style="text-align: center;">B</div> <div style="display: flex; flex-direction: column; align-items: center;"> <div style="width: 15px; height: 100px; background-color: #e0e0e0; border: 1px solid black;"></div> <div style="width: 15px; height: 100px; background-color: #0070c0; border: 1px solid black;"></div> <div style="width: 15px; height: 100px; background-color: #e0e0e0; border: 1px solid black;"></div> </div> <div style="text-align: center;">B</div> </div> <p>Two identical alleles</p>

Populations with low genetic diversity at the “sex locus” and are prone to extinction

Zayed and Packer 2005, PNAS, 102: 10742

A. cerana's 3-step solution to survive a bottleneck

Step 1: Mates lots and store the sperm

Ding et al. 2017 *Heredity* 119: 381

Step 2: Workers produce sons

38% of drone-producing nests in Cairns are queenless workers rearing drones

Typical queenless nest with multiple eggs per cell

Gloag, Ding, Christie, Oldroyd et al. unpubl.

FOUNDING QUEEN

Genetic diversity in stored sperm from source population

New queens carry *some* genetic diversity into new generations

All these worker's sons increase genetic diversity carried into new population...

Worker's sons carry *lots* of genetic diversity into new generations

Step 3: Natural selection lends a hand

Year 1
Many diploid males

Year 8
Fewer diploid males

Gloag et al. 2017 *Nature Ecology Evolution* 1, 001

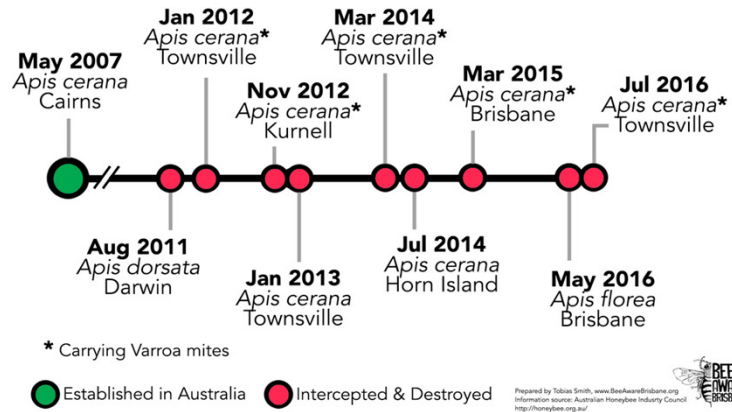

Lessons from past invasions

A. cerana are adept invaders: **one swarm** enough to found a population
→ high invasion risk

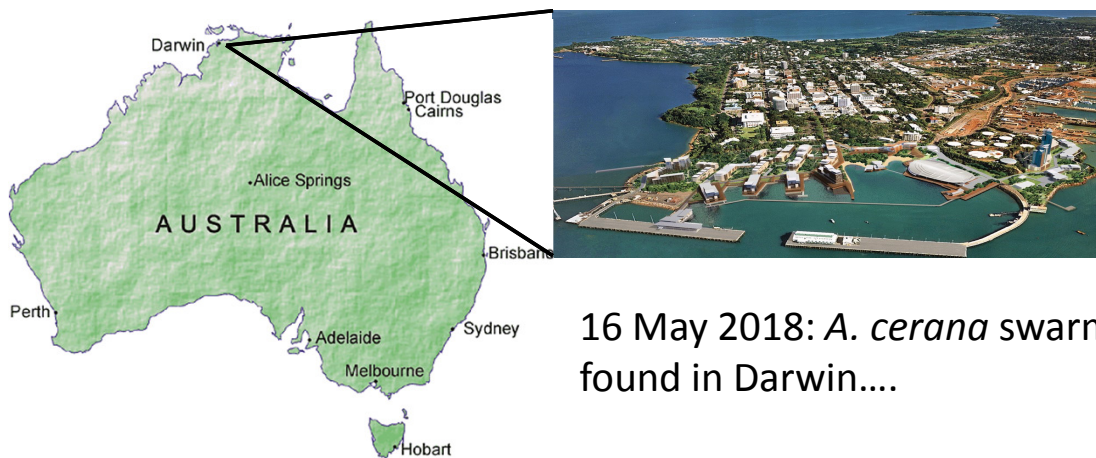

Not all incursions are equal → inbred populations may spread slowly and struggle to adapt, compared to outbred populations

Recent honey bee incursions to Australia

And they keep coming...

New incursion could also bring Varroa to existing Cairns population....

Reservoir of hosts ready and waiting!

Without Varroa, are *A. cerana* in Australia a problem for beekeeping?

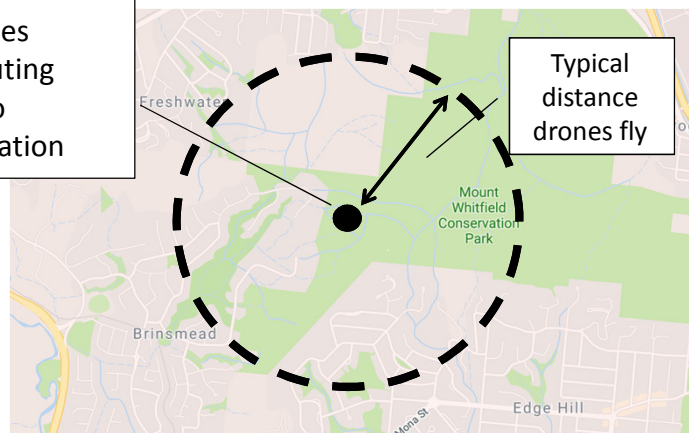

Using drones to estimate population size

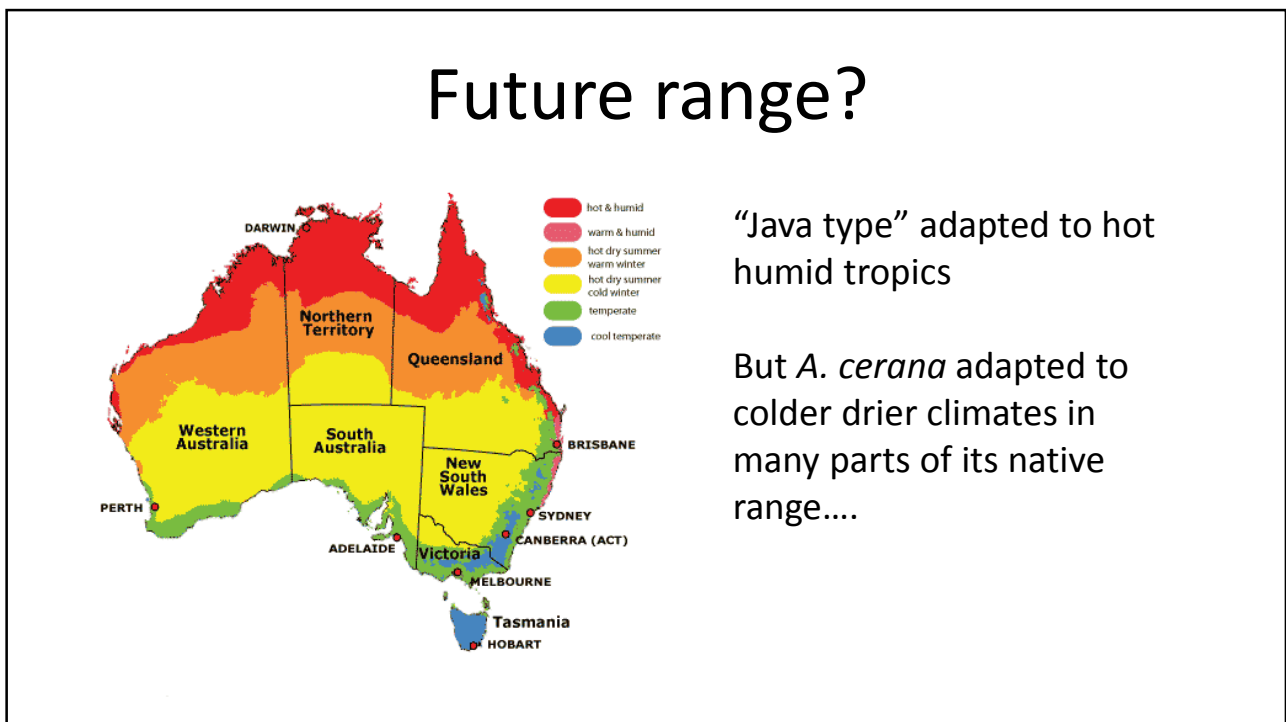

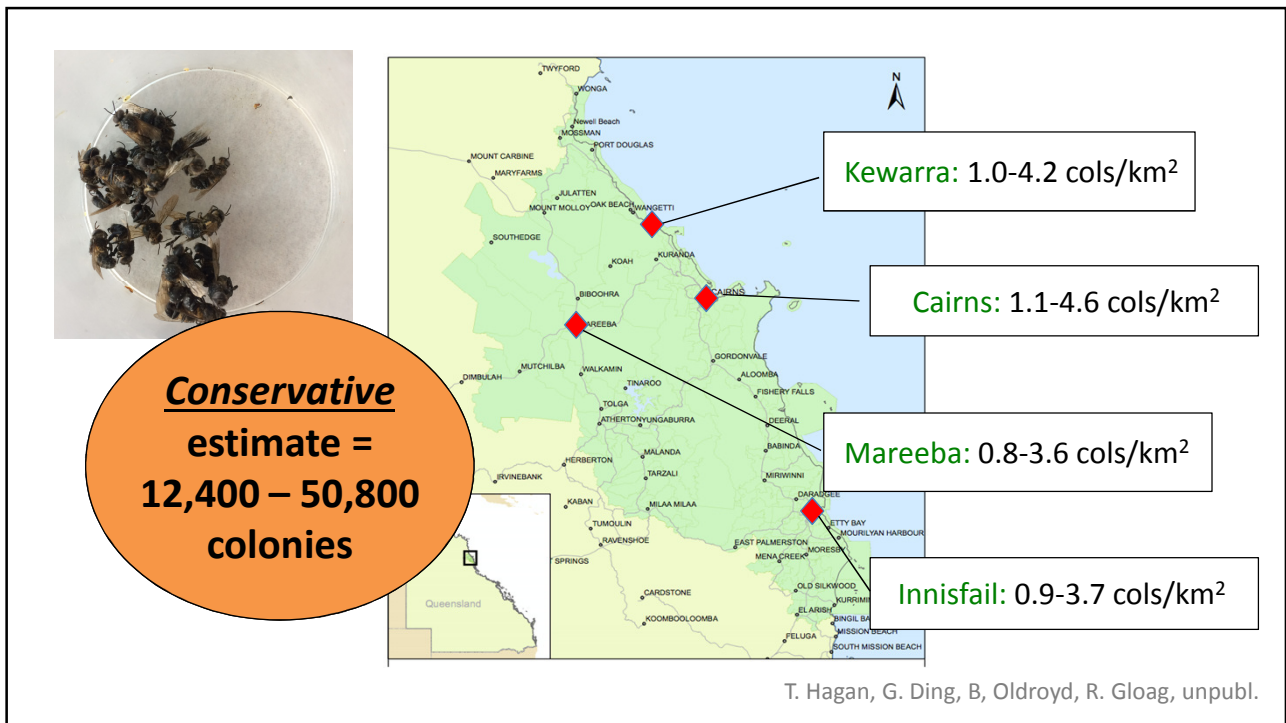

Using drones to estimate population size

N colonies
contributing
males to
congregation

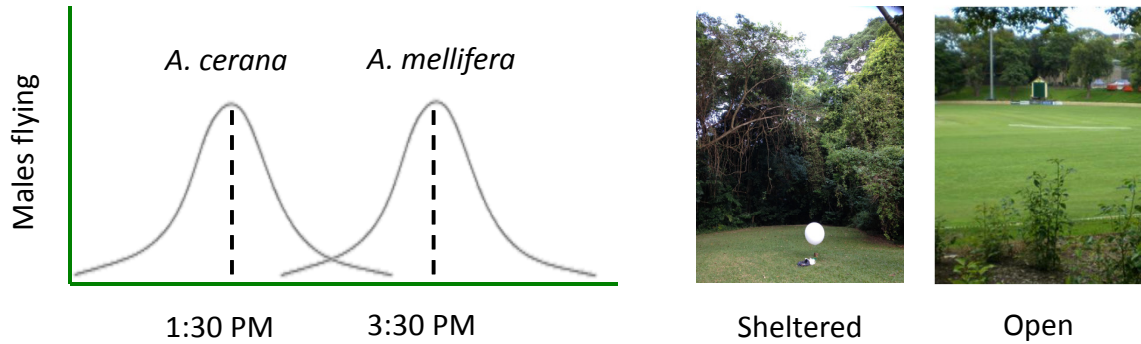

Typical
distance
drones fly

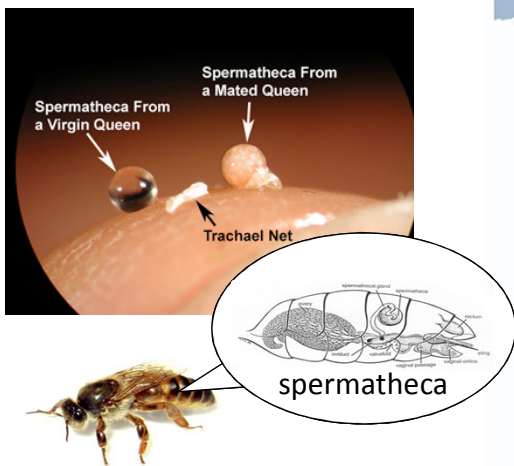

Interspecific mating

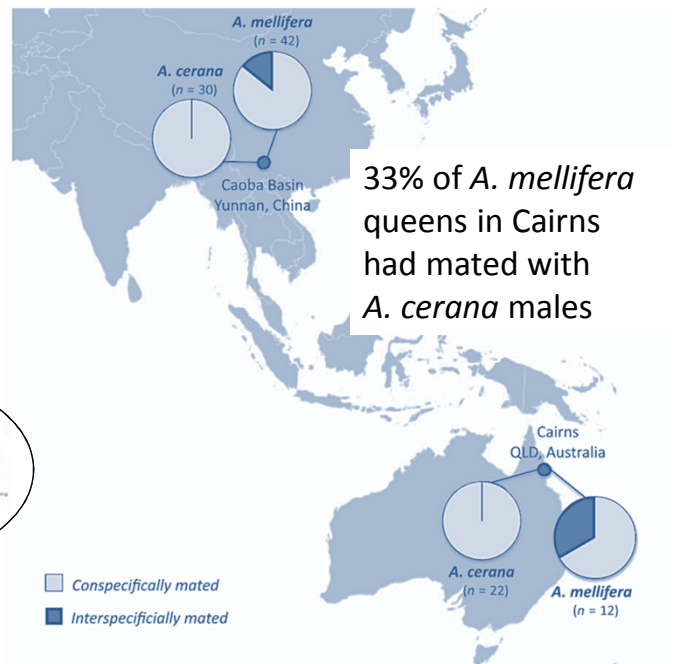

Different mating times, different mating places, and yet....

Interspecific mating

Remnant et al 2014 *Mol Ecol* 23: 1096

Interspecific mating

Based on AI, interspecific mating gives:

- Unfertilized eggs (males)
- Hybrid offspring that fail to develop beyond larval stage

Remnant et al 2014 *Mol Ecol* 23:1096; Gloag et al 2016 *Ins Soc* 64:241

Other impacts on industry and environment

- Competition for nest sites
- Competition for food
- Reservoir of disease

(these impacts hard to measure)

Crop pollinators of the future?

Important pollinator in native range

More lessons from past invasions

- Genetic tools developed in Queensland population can aid monitoring and detection of incursions
- *A. cerana* might impact beekeeping even in absence of Varroa
- Informed beekeeper community and public essential to bee biosecurity
